The Grounding Tester Verification Tool is designed to ensure the operational reliability of grounding testers after installation or during changes on site. With an ergonomic clamp-based design, it enables users to easily confirm the functionality of earthing systems and safety measures, especially in environments where explosive hazards are a concern.

Compatible with the ELOK mobile or PC application [EGT mate](#), the device tests all operational states across a variety of industrial equipment—including tank trucks, railcars, and big bags. It features robust object detection and is built to perform reliably in winter conditions, making it ideal for demanding workplace scenarios.

- Ergonomic clamp design for comfortable, efficient testing
- App integration with EGT mate for streamlined data management (QR code link from Play Store)
- Multi-object compatibility: tank trucks, railcars, big bags, and more
- Reliable object detection and winter operation capability
